PLATFORM FEATURES

A complete toolkit for career-focused students

From career score computation to AI-assisted mock interviews — each feature maps to a real gap in how students prepare for software engineering

A complete toolkit for career-focused students

From career score computation to AI-assisted mock interviews — each feature maps to a real gap in how students prepare for software engineering roles.

CORE

Career Score Engine

0–1000 weighted score computed from 9 indicators including projects, skills, experience, education, and AI readiness.

ATS Resume Analysis

Deep ATS scoring with keyword matching, formatting analysis, quantifiable achievements detection, and fix recommendations.

Skill Gap Detection

AI-powered comparison of your current skills against role requirements with priority learning recommendations.

90–Day Roadmaps

Structured week-by-week execution plans for 30, 60, and 90–day windows tailored to your target role and domain.

Intelligence Dashboard

Unified intelligence hub with placement eligibility scoring, trend analytics, and project competitiveness analysis.

ENTERPRISE

Data Engineering

Production-grade ETL pipelines, Star Schema warehouse, event-driven analytics, and real-time observability platform.

6 Specialised AI Modules

Each module reads from your actual profile — not generic templates. Recommendations are grounded in what you have built, studied, and experienced.

Career Copilot

Score explainability engine

AI Career Chat

Profile-aware Q&A

Resume Review

ATS scoring & feedback

Learning Coach

Personalised study plans

Mock Interview

Structured practice & feedback

Project Advisor

Portfolio gap analysis

Structured career decisions, not guesswork

The intelligence engine analyses your entire career profile to surface actionable insights that would otherwise require hours of manual self-assessment.

- ✓ **Career Score Computation**
9-factor weighted scoring model with trend tracking
- ✓ **Placement Eligibility**
Role-fit analysis against documented company requirements
- ✓ **Trend Analytics**
Technology demand and market context for your target domain
- ✓ **Project Competitiveness**
Portfolio gap analysis for recruiter readiness

 CAREER_SCORE

Your Career Score is computed using 9 weighted indicators. Projects (20%) and Technical Skills (20%) carry the highest impact on top tech placement shortlist rates.

Grounded in candidate profile, skills matrix, and target placement criteria.

Key Intelligence Takeaways

- Projects and Skills account for 40% of total score weight.
- Completing bio and contact information adds immediate profile completeness points.

Immediate High-Impact Actions

- Build at least 2 full-stack or AI projects with public GitHub repos.
- Add 3 missing core skills to your skill matrix.

What skills should I learn for Software Engineering?

04:33 pm

🚀 Quick-Start Roadmap for a Future Software Engineer *(Designed for an engineering student who's just getting started but wants a clear, actionable path)* | **Domain** | **Core Skills** | **Why It Matters** | **How to Learn (First 3-6 mo)** | |-----|-----|-----|-----| | **Foundations** | • **Programming fundamentals** (variables, control flow, OOP)
• **Data structures & algorithms** (arrays, linked lists, trees, sorting, graph traversal) | The "language-agnostic" brain that lets you solve any coding problem efficiently. | • Pick a single language and master it (Python for rapid prototyping *or* Java/C++ for strong typing).
• Complete "Data Structures & Algorithms" course on Coursera/edX or the free "CS50" series.
• Solve 1-2 problems daily on LeetCode (easy → medium). | | **Version Control** | • **Git** (branches, merges, rebases)
• **GitHub/GitLab** workflow (pull requests, code reviews) | Collaboration is the norm; version control is non-negotiable. | • Follow the "Git & GitHub" tutorial on GitHub Learning Lab.
• Create a personal repo for your projects.

How can I improve my Career Score?

What skills should I learn for Software Engineering?

Audits experience bullet points for metrics (% , numbers, users, requests, latency, time, placeholders)

#1 Developed backend REST APIs for student platform

Needs Quantification

Developed 12+ REST APIs that reduced average response time by 35% and supported 1,200+ concurrent users.

#2 Built React web application interface

Needs Quantification

Built a React dashboard serving 500+ daily active users with a 20% increase in user engagement.

#3 Implemented data visualization dashboard for military analytics

Needs Quantification

Implemented a dashboard that processed 10M+ records daily, cutting analysis time from 4 hrs to 15 mins.

#4 Created AI-driven career recommendation system (CareerOS-AI)

Needs Quantification

Created AI model achieving 87% recommendation accuracy for 2,000+ test users.
